According to the latest check-list, 351 chironomid species are known in Slovakia (BITUSÍK, 2004). Since that time, other five species have been published (BITUSÍK, 2005; HAMERLÍK & BOŠÁKOVÁ, 2005). This paper refers about other four firstly recorded chironomid species in Slovakia.

Material was obtained from the water surface by drift net (500 µm). Pupal exuviae were mounted on microscopic slides and identified by using the keys by LANGTON (1991) and CONTRERAS-LICHTENBERG (1986). Material is deposited in the author’s collection at the Institute of Zoology, Slovak Academy of Sciences, Bratislava.
