

Lectotype designations in the Buprestidae collection of the Zoological Institute Petersburg

Eduard JENDEK

State Forest Products Research Institute, Lamačská 1, 833 30 Bratislava, Slovakia

Abstract. Lectotypes are designated for *Agrilus tschitscherini* SEMENOV and *Agrilus ganglbaueri* SEMENOV.

Key words. Buprestidae, Coleoptera, *Agrilus*, lectotype designation.

Through the kindness of Dr. M. Volkovitsh, the Buprestidae in the collection of the Zoological Institute, Academy of Sciences, Petersburg, Russia, were studied and two lectotypes were designated. Lectotype labels have been attached to both. The slash mark (/) is used to indicate data from separate labels and my notations are in parentheses with the abbreviations (h) = handwritten and (p) = printed.

Agrilus tschitscherini SEMENOV

Agrilus tschitscherini, 1895: 135–137. There are two syntypes. A female is labelled: ISKANDER – KUL Glasunov 1892 (p)/ *Agrilus Tschitscherini* m. Typ I.95 (h) A. Semenov det. (p)/ **Lectotypus** *Agrilus tschitscherini* SEMENOV 1895 E. Jendek design 1993, II (p) (red label).

The other syntype without genitalia with the same first two labels is labelled as paralectotype.

Agrilus ganglbaueri SEMENOV

Agrilus ganglbaueri SEMENOV, 1891: 344–345. There are three syntypes from which a male is labelled: Tedshen 11.VI.88 A. Semenov (h) (written in Russian)/ *Agrilus Ganglbaueri* m. typ AS.XI.90 (h)/ coil. Semenov–Tian–Shansky (p)/ **Lectotypus** *Agrilus ganglbaueri* SEMENOV 1891 E. Jendek design. 1993, II (p) (red label).

The two remaining syntypes bear paralectotype labels.
